

SASE SOLUTION SECURES REMOTE WORKERS AND DATA

An Enablis Case Study

"After installing Prisma Access we are more secure and have faster network access. There is also the benefit of increased bandwidth to provide a better experience to educational students and customers," said the ANZ Manager - Information Technology.

CHALLENGES

POOR END USER PERFORMANCE AND INSUFFICIENT BANDWIDTH

WE NEEDED IMPROVED SECURITY AND SECURED REMOTE WORKERS ACROSS THE BUSINESS

MOST STAFF WERE WORKING REMOTELY AND ON THE ROAD. WE HAD INSUFFICIENT LICENCES FOR VPNS

LIMITED BUDGET TO ADDRESS THE REQUIREMENTS OF INCREASING BANDWIDTH AND VPN LICENCES

One of the world's leading medical equipment providers was in a situation where their VPN license count was exceeded due to the increase in staff being forced to work remotely, resulting in them being unable to connect to critical business applications.

Implementing our Prisma Access Solution exceeded the Executive, Global IT and Security requirements and increased bandwidth for a better customer experience.

THE CHALLENGES

SECURITY OF DATA AND STAFF

Increase IT service group morale - Our client's existing provider was restricted in terms of their understanding of the delivery of SD-WAN technology. This resulted in unhappy management - struggling to do their job effectively. The SASE solution leverages machine learning and automation to simplify management, enable app-defined SD-WAN policies and deliver a secure, cloud-delivered branch office.

Reducing inefficiencies - Our client was seeking to provide users with better performance by increasing bandwidth for their delivery platform for external virtual events. Our solution resulted in faster network access and increased bandwidth to provide a better experience to users and customers.

Reducing financial implications - With an existing budget, our client struggled to improve performance and data security as it involved securing additional funds. The SASE solution was able to do this within budget, reducing network connection costs and providing a faster network with simplified application access.

“

“The Prisma- SASE solution gave all users the same level of secure access to the internet and all applications irrespective of where they were,” ANZ Manager - Information Technology.

”

WHY THE PRIMSA - SASE SOLUTION WAS CHOSEN

- Performance improvements
- Increased bandwidth to provide a better experience to educational customers
- Security and peace of mind
- A much faster Network
- Increased productivity because staff don't have to remember to:
 - Connect to the VPN when out of the office
 - Disconnect when in the office
 - Connect when at a customer site
 - Connect when accessing on-prem apps or files

OUR SOLUTION

Implemented a cloud first strategy securing data and remote workers

Increased performance and productivity - across the business

Application visibility and performance monitoring - Enabled Zero Trust Network access based on user identity, device, application and not IP address or physical location for seamless protection on and off the network, whilst providing visibility to all data and applications from any location.

Increased bandwidth - Our solution offers multi-carrier redundancy of services to enable improved resilience and scalability. In turn, this has provided our clients users with a faster improved network and simplified application access for increased productivity.

SOLUTIONS AT A GLANCE

Secure remote workers

Application visibility and performance monitoring

Cloud first strategy securing data & applications

WHY ENBLIS WERE CHOSEN

"Enblis is a trusted partner that has supported us to deliver to our business goals of a cloud first strategy, securing data and providing our staff with increased performance and bandwidth to access applications from any location," ANZ Manager - Information Technology.

“ The Enblis team are responsive to all requests and provide superior customer support 24 x7...I am now able to offer my users secure access to all applications irrespective of where they might be accessing them from. Knowing that the applications have been accessed in a secure way provides the business and I with peace of mind.

”
